CS23336-Introduction to Python Programming

Started on Sunday, 17 November 2024, 11:14 PM

State Finished

Completed on Sunday, 17 November 2024, 11:42 PM

Time taken 27 mins 44 secs **Marks** 10.00/10.00

Grade 100.00 out of 100.00

Question 1

Correct
Mark 1.00 out of 1.00

Flag question

Question text

Create a Python program to delete a specific line from a text file based on a given line number.

Description:

- 1. **Input:**
 - A text file with multiple lines.
 - A line number to delete.

2. Output:

• The updated file with the specified line removed in file "output.txt".

Example:

• Input File Content:

"Line one. Line two. Line three. Line four."

Updated line two.

Output:

Line one. Line three. Line four.

For example:

print(text)

Answer:(penalty regime: 0 %)

Line four.

Test Input Expected print(text) Line four. Line four. with open('output.txt', 'r') as file: input2.txt Line A. text = file.read() Line B. Line B. print(text)

Passed all tests!

Correct

Marks for this submission: 1.00/1.00.

Question 2

Correct Mark 1.00 out of 1.00 Flag question

Question text

Develop a Python program to copy the contents of one file to another file.

Description:

1. Input:

Source file and destination file names.

2. Output:

• The content of the source file copied to the destination file.

For example:

Test **Input** Result with open('output1.txt', 'r') as file:
 text = file.read()
 print(text)
This is the source file.
It contains multiple lines of text.
Here is another line.

Answer:(penalty regime: 0 %)

Feedback

Test Input **Expected** Got

```
with open('output1.txt', 'r') as file:
    text = file.read()
    print(text)

with open('output2.txt', 'r') as file:
    text = file.read()
    print(text)

with open('output2.txt', 'r') as file:
    text = file.read()
    print(text)

with open('output3.txt', 'r') as file:
    text = file.read()
    print(text)

with open('output3.txt', 'r') as file:
    text = file.read()
    print(text)

This is the source file.

It contains multiple lines of text.

Here is another line.

Hello, world!
Python programming is amazing.
Python programming is amazing.
Let's copy this text to another file.

With open('output3.txt', 'r') as file:
    text = file.read()
    print(text)

Single line.

Single line.
```

Passed all tests!

Correct

Marks for this submission: 1.00/1.00.

Question 3

Correct
Mark 1.00 out of 1.00

Flag question

Question text

Develop a Python program to identify and print all palindrome words from a given text file.

Description:

1. Input:

• A text file containing multiple words.

2. Output:

• A list of palindrome words found in the file name as 'output.txt'.

For example:

Test Input Result

Answer:(penalty regime: 0 %)

Feedback

Test Input Expected Got

Passed all tests!

Correct

Marks for this submission: 1.00/1.00.

Question 4

Correct

Mark 1.00 out of 1.00

Flag question

Question text

Create a Python program to find the longest word in a text file.

- Input:
 - A text file containing multiple lines of text.
- Output:
 - $\circ~$ The longest word in the file.

For example:

Input Result

input1.txt Longest word: containing

Answer:(penalty regime: 0 %)	
1 i=input()	
2 with open(i,'r') as f:	
3 l=f.read()	
4 l=l.split() 5 s=max(l,key=len)	
6 print('Longest word:',s)	
print(Longest Word, 15)	

Feedback

Input **Expected** Got

input1.txt Longest word: containing Longest word: containing

input2.txt Longest word: thousand Longest word: thousand

 $input 3.txt \ Longest \ word: \ supercalifragilistic expial idocious \ word: \ supercalifrag$

Passed all tests!

Correct

Marks for this submission: 1.00/1.00.

Question 5

Correct

Mark 1.00 out of 1.00

Flag question

Question text

Create a Python program to write to a specific line in a text file, replacing the existing content of that line.

Description:

1. Input:

- A text file with multiple lines.
- A line number to write to.
- New content for the specified line.

2. Output:

 \circ The updated file with the specified line replaced by the new content in file "output.txt".

Example:

• Input File Content:

"Line one. Line two. Line three. Line four."

Updated line two.

Output:

Line one. Updated line two. Line three. Line four.

For example:

```
Answer:(penalty regime: 0 %)
```

```
1 i=input()
2 n=int(input())
3 s=input()
4- with open(i,'r') as f:
5 l=f.readlines()
6 l[n-1]=s+'\n'
7 with open('output.txt','w') as f:
8 f.writelines(l)
```

Feedback

```
Test
                                           Input
                                                           Expected
                                                                                Got
                                                        Line one.
                                                                          Line one.
with open('output.txt', 'r') as file: input1.txt
                                                        Updated line two. Updated line two.
   text = file.read()
                                      Updated line two. Line three. Line four.
                                                                          Line three.
   print(text)
                                                                          Line four.
with open('output.txt', 'r') as file: input2.txt
                                                        Line A.
                                                                          Line A.
   text = file.read()
                                                        Line B Updated.
                                                                        Line B Updated.
   print(text)
                                      Line B Updated.
                                                        Line C.
                                                                          Line C.
```

Passed all tests!

Correct

Marks for this submission: 1.00/1.00.

Question 6

Correct

Mark 1.00 out of 1.00

Flag question

Question text

Develop a Python program to read a text file and count the total number of words in the file.

Description:

1. Input:

- A text file containing several lines of text.
- File name you should get as input.

2. Output:

• The total number of words in the file.

For example:

Input Result

input2.txt Total words: 14

input3.txt Total words: 15

Answer:(penalty regime: 0 %)

Feedback

Input **Expected** Got

```
input1.txt Total words: 6 Total words: 6
input2.txt Total words: 14 Total words: 14
input3.txt Total words: 15 Total words: 15
```

Passed all tests!

Correct

Marks for this submission: 1.00/1.00.

Question 7

Correct

Mark 1.00 out of 1.00

Flag question

Question text

Write a Python program to reverse the contents of a specific line in a text file based on a given line number.

Description:

- 1. Input:
 - A text file with multiple lines.
 - A line number to reverse.

2. Output:

• The updated file with the specified line's contents reversed in file "output.txt".

Example:

• Input File Content:

"Line one. Line two. Line three. Line four."

Output:

Line one. Line two. eerht eniL. Line four.

For example:

```
Answer:(penalty regime: 0 %)
```

Feedback

```
Test
                              Input Expected
                                                 Got
with open('output.txt', 'r') as file: input1.txt Line two. Line two.
                             3
                                     eerht eniL. eerht eniL.
   print(text)
                                     Line four. Line four.
Line A.
   text = file.read()
                                              B eniL.
                             2
   print(text)
                                     Line C.
                                              Line C.
```

Correct

Marks for this submission: 1.00/1.00.

Question 8

Correct
Mark 1.00 out of 1.00

Flag question

Question text

Write a Python program to append a new line at a specific position in a text file, shifting existing lines down.

Description:

1. Input:

- A text file with multiple lines.
- A line number to insert the new line at.
- New content for the new line.

2. Output:

• The updated file with the new line inserted at the specified position, shifting the existing lines down in file "output.txt".

Example:

• Input File Content:

"Line one. Line two. Line three. Line four."

Inserted line..

Output:

Line one. Line two. Inserted line. Line three. Line four.

For example:

Test	Input	Result
<pre>with open('output.txt', text = file.read() print(text)</pre>	'r') as file: input1.txt 3 Inserted line.	
		line four

Answer:(penalty regime: 0 %)

```
1     i = input()
2     n = int(input())
3     s = input()
4     s = = '\n'
5          with open(i, 'r') as f:
6          l = f.readlines()
7          if n = l = len(l):
8          l(-1) += '\n'
9          l.insert(n-1,s)
10          with open('output.txt', 'w') as f:
11          f.writelines(l)
12
```

Test	Input	Expected	Got
<pre>with open('output.txt', 'r') as file: text = file.read() print(text)</pre>	input1.txt 3 Inserted line.	Line one. Line two. Inserted line. Line three. Line four.	Line one. Line two. Inserted line. Line three. Line four.
<pre>with open('output.txt', 'r') as file: text = file.read() print(text)</pre>	input2.txt 4 Inserted line D.	Line A. Line B. Line C. Inserted line D.	Line A. Line B. Line C. Inserted line D.

Passed all tests!

Correct

Marks for this submission: 1.00/1.00.

Question 9

Correct
Mark 1.00 out of 1.00

Flag question

Question text

Develop a Python program to read a specific line from a text file based on a given line number.

Description:

1. Input:

- A text file with multiple lines.
- A line number to read.

2. Output:

 $\circ~$ The content of the specified line.

input1.txt:

Line one.

Line two.

Line three.

Line four.

For example:

Input Result

input1.txt 3 Line three.

Input Expected Got

```
input1.txt
3
input2.txt
Line C. Line C.
```

Passed all tests!

Correct

Marks for this submission: 1.00/1.00.

Question 10

Correct

Mark 1.00 out of 1.00

Flag question

Question text

Write a Python program to count the frequency of each word in a given text file.

Description:

- 1. Input:
 - String as input.

2. Output:

· A list of words with their corresponding frequency count to be write in a file "output.txt"

Example:

• Input File Content:

apple orange apple banana apple orange

Output:

apple: 3 orange: 2 banana: 1

For example:

Test Input Result

with open('output.txt', 'r') as file:
 text = file.read() apple orange apple banana apple orange banana: 1
 print(text) orange: 2

Answer:(penalty regime: 0 %)

Test	Input		Expected	Got
<pre>with open('output.txt', text = file.read() print(text)</pre>	apple banana apple orange		apple: 3 banana: 1 orange: 2	apple: 3 banana: 1 orange: 2
<pre>with open('output.txt', text = file.read() print(text)</pre>	Hello everyone. Welcome to the world of	programming.	everyone: 1 hello: 2 of: 1 programming: 1 the: 1 to: 1 welcome: 1 world: 2	everyone: 1 hello: 2 of: 1 1 programming: 1 the: 1 to: 1 welcome: 1 world: 2
<pre>with open('output.txt', text = file.read() print(text)</pre>	fish Red fish blue fish		blue: 1 fish: 4 one: 1 red: 1 two: 1	blue: 1 fish: 4 one: 1 red: 1 two: 1

Passed all tests!

Correct

Marks for this submission: 1.00/1.00.
